"[f]or a few brief years, [the Mathematical Tables Project] was the largest computing organization in the world, and it prepared the way for the modern computing era."
D. Grier, 1997 [22]

"Blanch, more than any other individual, represents that transition from hand calculation to computing machines."
D. Grier, 1997 [22]

"[Gertrude Blanch] was virtually the backbone of the project, the hardest and most conscientious worker, and the one most responsible for the amount and high quality of the project's output."
H. E. Salzer, 1989 [54]

1 The Mathematical Tables Project

The present table was published by the Mathematical Tables Project, a project of the Works Progress Administration (WPA, renamed Works Projects Administration), a New Deal agency established by President Roosevelt to alleviate unemployment through public works. The purpose of the Mathematical Tables Project was to compute tables of higher mathematical functions. Because the Mathematical Tables Project was part of the WPA, much of the computation was done by hand. This project was in operation since January 1938 and its administrative director was Arnold Lowan.[1] The mathematical leader of the Project was Gertrude Blanch[2] [56, 22, 23, 24, 25, 26, 21].

Prior to the Mathematical Tables Project, the British association for the advancement of science had started publishing volumes of tables in 1931. Between 1931 and 1946, 11 volumes were published, and a final one in 1952 [12], [26, p. 174]. The British group appears with hindsight to have been driven less by the production of general fundamental tables than the Mathematical Tables Project. Instead, it was more aimed at organizing earlier tables. These twelve volumes are the following ones:

[1] Arnold Noah Lowan (1898–1962) [7, 4] was born Leibovici in Iasi (Romania). He graduated from the Bucharest Polytechnical Institute of Chemical Engineering in 1924, and the same year moved to the United States. He obtained a Master of Science from New York University in 1929 and a PhD from Columbia University in 1934. He was a fellow at the Institute for Advanced Study, Princeton (1928–1931), lecturer of mathematics at Brooklyn College, New York (1935–1940).

From 1938 to 1949, he was the director of the computation laboratory at the National Bureau of Standards, where he was directing the publication of a number of mathematical tables. From 1950 to 1952, he was a consultant at the US Naval Ordnance Laboratory and from 1955 to 1962, he was professor of mathematics at Yeshiva University, New York.

[2] Gertrude Blanch (1897–1996) was born in Poland and moved to the United States around 1907. After having graduated from high school in 1914, she first worked as a clerk for 14 years, honing her skills and knowledge of accounting, inventory, planning, risk calculations, and so on. In 1928, she fulfilled her dream to become a mathematician and matriculated to New York University. She received a BSc in Mathematics from NYU in 1932 and a PhD in mathematics from Cornell University in 1935. Around the end of 1937, while attending a continuing education class on relativity taught by Arnold Lowan, Lowan offered her the job of technical director of the Mathematical Tables Project, which she joined in February 1938. Within that project, she designed algorithms that were executed by teams of human computers. Blanch also worked regularly with the Manhattan Project, both during and after the war. In the mid-1950s, she was hired by the Air Force and continued to work on numerical analysis, in particular on Mathieu functions.

I. *Circular and hyperbolic functions, exponential and sine and cosine integrals, factorial and allied functions, hermitian probability functions* (1931)

II. *Emden functions, being solutions of Emden's equation together with certain associated functions* (1932)

III. *Minimum decompositions into fifth powers* (1933)

IV. *Cycles of reduced ideals in quadratic fields* (1934)

V. *Factor table giving the complete decomposition of all numbers less than 100,000 (1935)* [49]

VI. *Bessel functions. Part I. Functions of orders zero and unity.* (1937)

VII. *The probability integral* (1939)

VIII. *Number-divisor tables* (1940)

IX. *Table of powers, giving integral powers of integers* (1940)

X. *Bessel functions. Part II. Functions of positive integer order.* (1952)

Part-volume A. *Legendre polynomials* (1946)

Part-volume B. *The Airy integral, giving tables of solutions of the differential equation* $y'' = xy$ (1946)

On the other hand, the Mathematical Tables Project computed a number of large tables mostly *ab initio*. Moreover, the purpose of the Project was not so much to complete the computations quickly, but to keep the (human) computers busy, and at the same time to conduct some useful work. At one point the Mathematical Tables Project employed 450 human computers, sometimes aided by mechanical calculating machines, a group which was reminiscent of the one set up for the famed French *Tables du cadastre* [50].

The main tables published between 1939 and 1949 by the Mathematical Tables Project are the following ones:[3]

- *Table of the first ten powers of the integers from 1 to 1000*, 1939
- *Tables of the exponential function* e^x, 1939
- *Tables of circular and hyperbolic sines and cosines for Radian arguments*, 1939
- *Tables of sines and cosines for Radian arguments*, 1940
- *Tables of sine, cosine and exponential integrals*, 1940 (2 volumes)
- *Table of natural logarithms*, 1941 (4 volumes) (reconstructed in [52])
- *Tables of the moment of inertia and section modulus of ordinary angles, channels, and bulb angles with certain plate combinations*, 1941
- *Miscellaneous physical tables*, 1941

[3]Numbers such as MT1, MT2, etc. were given to each volume, but only at a later time. They served for a proper identification of each volume. However, the numbers given in the National Bureau of Standards's publication list [45] and by Grier [23] do not completely coincide. It was possibly only after 1948 that a set of 28 "main tables" was presented, with numbers from MT1 to MT28. The list given here is that given by Grier.

- *Table of sine and cosine integrals for arguments from 10 to 100*, 1942
- *Tables of probability functions*, 1942 (2 volumes)
- *Table of arc tan x*, 1942
- *Table of reciprocals of the integers from 100,100 through 200,009*, 1943
- *Table of the Bessel functions $J_0(z)$ and $J_1(z)$ for complex arguments*, 1943
- *Table of circular and hyperbolic tangents and cotangents for radian arguments*, 1943
- *Tables of Lagrangian interpolation coefficients*, 1944
- *Table of arc sin x*, 1945
- *Tables of associated Legendre functions*, 1945
- *Tables of fractional powers*, 1946
- *Tables of spherical Bessel functions*, 1947 (2 volumes)
- *Tables of Bessel functions of fractional orders*, 1948 & 1949 (2 volumes)
- *Tables of Bessel functions $Y_0(x)$, $Y_1(x)$, $K_0(x)$, $K_1(x)$, $0 \leq x \leq 1$*, 1949

Many other smaller or more specialized tables were also published by the Mathematical Tables Project. Lists of published tables are given in the appendices of each of the published volumes. The announcement published in 1941 [16] also lists the tables published so far, those for which computation had been completed or was in progress, and those which were considered for calculation. Archibald's survey gives the status of computations by the end of 1942 [6].

The WPA was terminated in 1943, but the Mathematical Tables Project continued to operate in New York until 1948. That year, a number of members of the Mathematical Tables Project moved to Washington, DC to become the Computation Laboratory of the National Bureau of Standards, now the National Institute of Standards and Technology. But Blanch moved to Los Angeles to lead the computing office of the Institute for Numerical Analysis at UCLA, anf Lowan joined the faculty at Yeshiva University in New York. Other tables continued to be computed, of which a detailed list is given by Fletcher *et al.* [17, pp. 718–720].

The greatest legacy of the Project is the *Handbook of Mathematical Functions* [1], published in 1964, and edited by Milton Abramowitz (1915–1958) and Irene A. Stegun (1919–2008), two veterans of the Project. But more broadly, the Project developed "the numerical methods of scientific computation [and demonstrated] that computation could solve practical and important problems" [22].

2 The Project's tables of exponential functions (1939)

The tables of exponentials described and reconstructed here were first published in 1939 [35]. The content of the Project's table was prepared after consultation with Van Orstrand, who had authored a major table of the exponential function published in 1921 [60].

The content of the present volume is the following:

- ascending exponential e^x
  - first part, for x from 0.0000 to 0.9999 (100 values per page, in two columns, to 18 decimal places) (10000 values, 100 pages)
  - second part, from 1.0000 to 2.4999 (100 values per page, in two columns, to 15 decimal places) (15000 values, 150 pages)
  - third part, from 2.500 to 4.999 (100 values per page, in two columns, to 15 decimal places) (2500 values, 25 pages)
  - fourth part, from 5.00 to 9.99 (100 values per page, in two columns, to 12 decimal places) (500 values, 5 pages)
- descending exponential e^{-x}, for x from 0.0000 to 2.4999 (100 values per page, in two columns, to 18 decimal places) (25000 values, 250 pages)
- ascending exponential e^x, for x from 0.000000 to 0.000099 to 18 places (100 values, two columns, 1 page)
- descending exponential e^{-x}, for x from 0.000000 to 0.000099 to 18 places (100 values, two columns, 1 page)
- ascending exponential e^x, for x from 1 to 100 with decimal exponent and mantissa $1 \leq m < 10$ to 19 significant figures (1 page)
- descending exponential e^{-x}, for x from 1 to 100 with decimal exponent and mantissa $1 \leq m < 10$ to 19 significant figures (1 page)
- ascending (e^x) and descending (e^{-x}) exponentials to 18 places, for $x = n \cdot 10^{-p}$, for $1 \leq n \leq 9$ and $7 \leq p \leq 10$ (72 values, two columns, 1 page)

The integer parts are usually given every fifth value, and also whenever they change.

All the above tables have been reconstructed here. In addition to these tables, the third edition of the Project's volume published in 1951 also gives the first 2552 decimals of e (one page), and of $1/e$ (one page). Earlier editions gave less decimals. We have checked that these 2552 decimals are all exact and that the last place is not rounded. These decimals have not been reproduced here, but might be added in a future version of our work.

3 Other tables of exponential functions

The Project's tables of exponential functions were not the first such tables. We give here an overview of published tables of the exponential function, omitting the specific computations of e to many places and exponentials of special values such as π.

One of the earliest tables of exponentials was the one given by Schulze in 1778 [55, p. 188]. He gave the values of e^n for $1 \leq n \leq 25$, 30 and 60, to 28 or 29 significant places, correct to about 28 places, but depending on n.

In 1797, Vega [61, vol. 2, pp. 141–148] gave e^x for $x = 0.01$ to $x = 10.00$ at 0.01 intervals and to seven places. These values were later reprinted by Köhler's in his *Logarithmisch-trigonometrisches Handbuch* (1847) [32].

In 1827, Salomon [53, p. 464] gave the values of e^n, $e^{n/10}$, etc., $e^{10^{-7}n}$ for $1 \le n \le 9$ to 12 decimal places.

In 1843, Bretschneider [9] gave a 105-place value of e as well as 20 decimal place values of e^n and e^{-n} for $1 \le n \le 10$.

In 1876 (but only published in 1883), Newman [46] gave 18 decimal places (16 exact) of e^{-x} for $0.1 \le x \le 37.0$, 12 decimal places of e^{-x} for $0.001 \le x \le 15.349$ at 0.001 intervals, 14 decimal places of e^{-x} for $15.350 \le x \le 17.298$ at 0.002 intervals, and 14 decimal places of e^{-x} for $17.300 \le x \le 27.635$ at 0.005 intervals.

In 1877 (but only published in 1883), Glaisher [19] reproduced Schulze's table, and then gave values of e^x and e^{-x} for $0.001 \le x \le 0.100$, for $0.01 \le x \le 2.00$, for $0.1 \le x \le 10.0$, and for $1 \le n \le 100$, all to about 9 significant places.

In 1884, Gram [20] gave the values of e^n for $10 \le n \le 20$ to 36 decimal places, values of e^{2n} for $50 \le n \le 200$, usually to 15 decimal places, as well as other values, to less accuracy. These values were given in the context of the evaluation of the number of primes up to a certain limit.

In 1889, Newman [47] gave the values of e^x from $x = 0.1$ to 3.0 to 16 decimals, and from $x = 0.000$ to 1.999 to 12 decimals.

In 1900, Burgess [10] gave the values of e^{-x} for $0 \le x \le 10$, as well as $x = 0.5$ to 30 decimals.

In 1913, Van Orstrand [59] gave the values of e^x and e^{-x} for $x = 0.0$ to $x = 32.0$ to 20 places.

In 1921, Van Orstrand [60] (reviewed by Archibald [5]) gave the values of e^x for $1 \le x \le 100$ to 42 significant places, of e^x for $x = 0.0$ to 50.0 to 33 significant places, the values of e^x for $x = a \cdot 10^{-b}$ for $1 \le a \le 9$ and $1 \le b \le 10$ to 62 decimal places, the values of e^{-x} for $0 \le x \le 100$ to 52 to 62 places, of e^{-x} for $x = 0.0$ to 50.0 to 33 to 48 decimal places, the values of e^{-x} for $x = a \cdot 10^{-b}$ for $1 \le a \le 9$ and $1 \le b \le 10$ to 63 decimal places, the values of $e^{\pm\frac{n\pi}{360}}$ for $0 \le n \le 360$ to 23 decimal places, as well as the values of $e^{\pm n\pi}$ for various values of n and to 25 decimal places.

In 1922, Peters and Stein [48] gave the values of e^n for $1 \le n \le 32$ to 32 significant digits. Values of e^{-n} were given for $1 \le n \le 32$ to 32 decimal places.

In 1937, Uhler [57] gave the values of e, $1/e$, e^2, e^4, e^6, e^8, e^{10}, e^{-10}, e^{100}, e^{-100} to many places. For instance, e^{10} is correctly given to 253 decimal places. Two of these values, e^{10}, e^{-10}, were slightly extended in 1940 [58].

And in 1938, Holtappel [31], who was apparently only aware of the works of Newman and Glaisher published in 1883, gave the values of e^x and e^{-x} for $x = 0.000$ to 9.999 to 10 decimal places, of e^x for $1 \le x \le 24$ to at least 20 decimal places, of e^{-x} for $1 \le x \le 24$ to at least 16 decimal places, of e^x for $x = 0.1$ to 0.9 to 24 places, of e^{-x} for $x = 0.1$ to 0.9 to 18 places, of e^x for $x = 0.01$ to 0.09 to 25 places, of e^{-x} for $x = 0.01$ to 0.09 to 18 places, of e^x for $x = 0.001$ to 0.009 to 24 places, of e^{-x} for $x = 0.001$ to 0.009 to 18 places, of e^x for $x = 0.0$ to 9.9 to 18 places, of e^x for $x = 0.000$ to 0.099 to 24 places, of e^x for $x = 0.000$ to 0.999 to 17 places, of $e^{x \cdot 10^{-6}}$ for $x = 0$ to 999 to 20 places, of $e^{x \cdot 10^{-9}}$ for $x = 0$ to 999 to 20 places, and of $e^{x \cdot 10^{-12}}$ for $x = 0$ to 999 to 20 places.

Some tables can also be used to derive tables of exponentials, although they do not provide them directly. This is for instance the case of the tables published by Gudermann in 1833 [28]. This work contains tables of (decimal logarithms of) hyperbolic trigonometric functions which could be used to derive tables of exponentials, since $e^x = \sinh x + \cosh x$ and $e^{-x} = \cosh x - \sinh x$.

There are a number of other references, which can be found in the works of Glaisher [18], Henderson [30], and Fletcher [17].

4 The computation of the Project's tables

The Project's original tables were meant to give the values of the exponentials with a correct rounding to the last decimal place. The examination of a number of values in the tables seems to confirm the claimed accuracy and we have not been able to find any error. One can for instance compare the excerpt of figure 1 with the corresponding part in our reconstruction.

We give here a few elements on the original computations, as described in the introduction of the original volume [35]. The procedures used by the Project's team, although quite elementary, are interesting because they make use of a number of checks aimed to ensure the correctness of the final tables.

The original computation was based on the values of e^x and e^{-x} for a number of key arguments. First, the values of the exponentials for the 72 "fundamental key arguments"

$$\begin{aligned} x &= 1 \times 10^{-4} \text{ to } 9 \times 10^{-4} \text{ at intervals of } 10^{-4} \\ x &= 1 \times 10^{-3} \text{ to } 9 \times 10^{-3} \text{ at intervals of } 10^{-3} \\ x &= 1 \times 10^{-2} \text{ to } 9 \times 10^{-2} \text{ at intervals of } 10^{-2} \\ x &= 1 \times 10^{-1} \text{ to } 9 \times 10^{-1} \text{ at intervals of } 10^{-1} \end{aligned}$$

were computed by direct substitution in the exponential series expansions. These values had been computed before by Van Orstrand [60] but were recomputed by the Project's team.

Then, the values of the exponentials for $x = 0.01$ to 0.99 and for $x = 0.0001$ to 0.0099 were computed to 25 places of decimals as follows: basically, each e^x was multiplied by $e^{0.01}$ and by $e^{-0.01}$, so that $e^{x+0.01}$ and $e^{x-0.01}$ were obtained. Starting this process with $e^{0.01}$ and repeating it both gave the values of $e^{0.02}$, $e^{0.03}$, etc., and was a check with the earlier values. A similar technique was applied for the range $x = 0.0001$ to 0.0099. Moreover, when computing $e^{0.0001}$, $e^{0.0002}$, etc., every ten values the values of $e^{0.001}$, $e^{0.002}$, etc., could be compared with the fundamental key values. Similar computations were performed for all the tables in this volume.

The computed values were then subjected to the "Curvature Test." The expression

$$R = e^{x+h} + e^{x-h} - 2e^x - 10^{-8}e^x - \frac{10^{-16}e^x}{12}$$

was computed for even values of the arguments x, for instance for $x = 0.0002$, $x = 0.0004$, etc. In this case, $h = 10^{-4}$ and since $R = 2e^x \left(\frac{h^6}{6!} + \frac{h^8}{8!} + \cdots\right)$, and assuming $x \leq 1$, we

have that $R < 10^{-26}$. Such a test was applied for various ranges. Using the "Curvature Test," every even argument was tested once and every odd argument was tested twice.

A "Geometric Test" was also applied, and it consisted of adding the entries in the final manuscript in groups of ten, and comparing the sums with their precomputed values. For instance, $e^x + e^{x+h} + e^{x+2h} + \cdots + e^{x+9h} = e^x(1 + e^h + e^{2h} + \cdots) = e^x G$ was computed in advance and compared with the sums from the manuscript.

Finally, a "Fourth Difference Test" was applied. The quantity $S = e^x - 4e^{x+h} + 6e^{x+2h} - 4e^{x+3h} + e^{x+4h}$ was computed for groups of five consecutive entries, each group containing the last entry of the preceding group, for instance $e^{0.0000}, e^{0.0001}, e^{0.0002}, e^{0.0003}, e^{0.0004}$, then $e^{0.0004}, e^{0.0005}, e^{0.0006}, e^{0.0007}, e^{0.0008}$, etc.

Since

$$S = e^x(e^h - 1)^4 = e^x(h + \frac{h^2}{2} + \cdots)^4 = h^4 e^x(1 + \frac{h}{2} + \cdots)^4 \approx h^4 e^x(1 + 2h + o(h))$$

it was checked that $S - h^4 e^x$ was not greater than $2h^5 e^x$.

All these procedures made the authors confident that their volume was entirely free of errors.

Figure 1: An excerpt of the Project's table of exponentials.

MATHEMATICAL TABLES

The tables listed below (with the exception of MT15) were prepared by the Project for the Computation of Mathematical Tables conducted by the Federal Works Agency, Work Projects Administration for the city of New York, under the sponsorship of and made available through the National Bureau of Standards. They are of special interest to physicists, engineers, chemists, biologists, mathematicians, computers, and others engaged in scientific and technical work.

The tables have been arranged in the following groups: Those obtainable from : (1) the Superintendent of Documents, Government Printing Office, (2) Columbia University Press, and (3) those available elsewhere.

(1) TABLES OBTAINABLE FROM THE SUPERINTENDENT OF DOCUMENTS

MT1. Table of the first ten powers of the integers from 1 to 1,000.
MT2. Tables of the exponential function e^x. $3.00.
MT3. Tables of circular and hyperbolic sines and cosines for radian arguments. $2.50.
MT4. Tables of sines and cosines for radian arguments. $2.00.
MT5. Tables of sine, cosine, and exponential integrals, volume I. $2.75.
MT6. Tables of sine, cosine, and exponential integrals, volume II. $2.00.
MT7. Table of natural logarithms, volume I. $3.00.
MT8. Tables of probability functions, volume I. $2.00.
MT9. Table of natural logarithms, volume II. $3.00.
MT10. Table of natural logarithms, volume III. $3.00.
MT11. Tables of the moments of inertia and section moduli of ordinary angles, channels, and bulb angles with certain plate combinations. $2.00.
MT12. Table of natural logarithms, volume IV. $3.00.
MT13. Table of sine and cosine integrals for arguments from 10 to 100. $2.00.
MT14. Tables of probability functions, volume II. $2.25.
MT15. The hypergeometric and Legendre functions with applications to integral equations of potential theory. Chester Snow, National Bureau of Standards.
MT16. Table of arc tan x. $2.00.
MT17. Miscellaneous physical tables: Planck's radiation functions, and electronic function. $1.50.
MT18. Table of the zeros of the Legendre polynomials of order 1 — 16 and the weight coefficients for Gauss' mechanical quadrature formula. A. N. Lowan, N. Davids, and A. Levenson. 25c.
MT19. On the function $H(m,a,x) = \text{EXP}\ (-ix)\ F\ (m + 1 - ia,\ 2m + 2;\ ix)$. With table of the confluent hypergeometric function and its first derivative. A. N. Lowan and W. Horenstein. 25c.
MT20. Table of integrals $\int_0^x J_0(t)dt$ and $\int_0^x Y_0(t)dt$. Arnold N. Lowan and Milton Abramowitz. 25c.
MT21. Table of $Ji_0(x) = \int_x^\infty \frac{J_0(t)}{t}\,dt$ and related functions. Arnold N. Lowan, G. Blanch, and M. Abramowitz. 25c.
MT22. Table of coefficients in numerical integration formulae. A. N. Lowan and Herbert Salzer.
MT23. Table of Fourier coefficients.....Arnold N. Lowan and Jack Laderman
Reprinted from Journal of Mathematics and Physics, September 1943. 11 p.
MT24. Coefficients for numerical differentiation with central differences.
Herbert E. Salzer
Reprinted from Journal of Mathematics and Physics, September 1943. 21 p. 25c.
MT25. Seven-point Lagrantian integration formulas....G. Blanch and I. Rhodes
Reprinted from Journal of Mathematics and Physics, December 1943. 4 p. 25c.
MT26. A short table of the first five zeros of the transcendental equation $J_0(x)Y_0(kx) - J_0(kx)Y_0(x) = 0$.....A. N. Lowan and A. Hillman
Reprinted from Journal of Mathematics and Physics, December 1943. 2 p. 25c.

Figure 2: The list of mathematical tables available from the National Bureau of Standards in 1948 (1/3) [45].

MT27. Table of coefficients for inverse interpolation with central differences.
Herbert E. Salzer
Reprinted from Journal of Mathematics and Physics, December 1943. 15 p. 25c.

MT28. Table of $f_n(x) = \frac{n!}{(x/2)^n} J_n(x)$.....The Mathematical Tables Project
Reprinted from Journal of Mathematics and Physics, February 1944. 16 p. 25c.

MT29. Table of coefficients for inverse interpolation with advancing differences.
Herbert E. Salzer
Reprinted from Journal of Mathematics and Physics, May 1944. 28 p. 25c.

MT30. A new formula for inverse interpolation.....H. E. Salzer
Reprinted from Bulletin of the American Mathematical Society, August 1944. 4 p. 25c.

MT31. Coefficients for interpolation within a square grid in the complex plane.
A. N. Lowan and H. E. Salzer
Reprinted from Journal of Mathematics and Physics, August 1944. 11 p. 25c.

MT32. Table of coefficients for differences in terms of the derivatives..H. E. Salzer
Reprinted from Journal of Mathematics and Physics, November 1944. 4 p. 25c.

MT33. Table of coefficients for numerical integration without differences..
A. N. Lowan and H. E. Salzer
Reprinted from Journal of Mathematics and Physics, February 1945. 21 p. 25c.

MT34. Inverse intepolation for eight-, nine-, ten-, and eleven-point direct interpolation.....H. E. Salzer
Reprinted from Journal of Mathematics and Physics, May 1945. 4 p. 25c.

MT35. Table of coefficients for double quadrature without differences, for integrating second order differential equations.....H. E. Salzer
Reprinted from Journal of Mathematics and Physics, November 1945. 6 p. 25c.

MT36. Formulas for direct and inverse interpolation of a complex function tabulated along equidistant circular arcs.....H. E. Salzer
Reprinted from Journal of Mathematics and Physics, November 1945. 8 p. 25c.

Coordinate conversion tables.
Published as Technical Manual TM 4-238 of the War Department. March 25, 1943. 338 p., 5½ by 8½ in. 40c.

Hydraulic tables (2d ed.).
Published by the Corps of Engineers, War Department. (1944) 565 p. Blue imitation leather flexible cover, 4½ by 6¾ in. $1.50.

(2) TABLES OBTAINABLE FROM THE COLUMBIA UNIVERSITY PRESS

The following four tables can be obtained from the Columbia University Press, Morningside Heights, New York 27, N. Y.

Table of reciprocals of the integers from 100,000 through 200,009.
(1943) 201 p. Buckram cover. $4.00.

Table of Bessel functions $J_0(z)$ and $J_1(z)$ for complex arguments.
(1943) 403 p. Buckram cover. $5.00.

Table of circular and hyperbolic tangents and cotangents for radian arguments.
(1943) 410 p. Buckram cover. $5.00.

Tables of Lagrangian interpolation coefficients.
(1944) 392 p. Buckram cover. $5.00.

Table of arc sin x.
(1945) 121 p. Buckram cover. $3.50.

Tables of associated Legendre functions.
(1945) 302 p. Buckram cover. $5.00.

(3) TABLES AVAILABLE ELSEWHERE

The eight tables listed below can be consulted in libraries maintaining a file of mathematical and technical journals. No reprints of them are obtainable from the Bureau.

On the computation of second differences of the $Si(x)$, $Ei(x)$, and $Ci(x)$ functions.
Arnold N. Lowan
Bulletin of the American Mathematical Society, vol. 45, No. 8, pp. 583-588 (August 1939).

On the distribution of errors in the nth tabular differences.
Arnold N. Lowan and Jack Laderman
Annals of Statistics, vol. X, No. 4, pp. 360-364 (December 1939).

Figure 3: The list of mathematical tables available from the National Bureau of Standards in 1948 (2/3) [45].

Note on the computation of the differences of the $Si(x)$, $Ci(x)$, $Ei(x)$ and $-Ei(-x)$ functions.....Milton Abramowitz
Bulletin of the American Mathematical Society, vol. 46, No. 4, pp. 332-333 (April 1940).

Errors in Hayashi's table of Bessel functions for complex arguments.
Arnold N. Lowan and Gertrude Blanch
Bulletin of the American Mathematical Society, vol. 47, No. 4, pp. 291-293 (April 1941).

Tables of stellar functions for "point-source" models.
Published under the title "The Internal Temperature-Density Distribution of the Sun" in the Astrophysical Journal (Yerkes Observatory, Williams Bay, Wis.) vol. 94, pp. 37–45 (July 1941). By G. Blanch, A. N. Lowan, R. E. Marshak, and H. A. Bethe.

On the inversion of the q-series associated with Jacobian elliptic functions.
A. N. Lowan, G. Blanch, and W. Horenstein
Bulletin of the American Mathematical Society, vol. 48, No. 10, pp. 737-738 (October 1942).

A table of coefficients for numerical differentiation.
Arnold N. Lowan, Herbert E. Salzer, and Abraham Hillman
Bulletin of the American Mathematical Society, vol. 48, No. 12, pp. 920-924 (December 1942).

Roots of $\sin z = z$.....A. P. Hillman and H. E. Salzer
Gives the first 10 nonzero roots of $\sin z = z$ in the first quadrant to six decimal places.
Roots of $\sin z = z$, where $z = x + iy$. Philosophical Magazine, Series 7, vol. XXXIV, p. 575 (August 1943).

Figure 4: The list of mathematical tables available from the National Bureau of Standards in 1948 (3/3) [45].

BRITISH ASSOCIATION MATHEMATICAL TABLES

Volume I Circular and Hyperbolic Functions, Exponential, Sine and Cosine Integrals, Factorial Function and Allied Functions, Hermitian Probability Functions. First edition, 1931. Second edition, 1946. Third edition, 1951.

II Emden Functions, being Solutions of Emden's Equation together with Certain Associated Functions. 1932

III Minimum Decompositions into Fifth Powers. Prepared by L. E. Dickson. 1933

IV Cycles of Reduced Ideals in Quadratic Fields. Prepared by E. L. Ince. 1934. Reprinted 1966

V Factor Table, giving the Complete Decomposition of all Numbers less than 100,000. Prepared independently by J. Peters, A. Lodge and E. J. Ternouth, E. Gifford. 1935

VI Bessel Functions. Part I, Functions of Orders Zero and Unity. 1937. Reprinted 1950, 1958

VII The Probability Integral. Initiated and in part prepared by W. F. Sheppard. 1939. Reprinted 1966

VIII Number-divisor Tables. Designed and in part prepared by J. W. L. Glaisher. 1940. Reprinted 1966

IX Table of Powers, giving Integral Powers of Integers. Initiated by J. W. L. Glaisher. Extended by W. G. Bickley, C. E. Gwyther, J. C. P. Miller, E. J. Ternouth. 1940. Reprinted 1950

X Bessel Functions. Part II, Functions of Positive Integer Order 2 to 20. Prepared by W. G. Bickley, L. J. Comrie, J. C. P. Miller, D. H. Sadler and A. J. Thompson. 1952. Reprinted 1960

PART-VOLUME A Legendre Polynomials. Prepared by L. J. Comrie. 1946

B The Airy Integral, giving Tables of Solutions of the Differential Equation $y''=xy$ Prepared by J. C. P. Miller. 1946
(Auxiliary tables I and II are included with Part-Volume B.)

AUXILIARY TABLES

Number I Coefficients in the Modified Everett Interpolation Formula. 1946

II Table for Interpolation with Reduced Derivatives. Coefficients for Function and for First Derivative. 1946

Note. In July 1948 the Royal Society assumed responsibility for the work on mathematical tabulation formerly undertaken by the British Association.

Figure 5: The list of mathematical tables from the British association for the advancement of science (excerpt from the 1968 edition of volume 4).

References

The following list covers the most important references[4] related to the Mathematical Table Project's table. Not all items of this list are mentioned in the text, and the sources which have not been seen are marked so. We have added notes about the contents of the articles in certain cases.

[4] **Note on the titles of the works:** Original titles come with many idiosyncrasies and features (line splitting, size, fonts, etc.) which can often not be reproduced in a list of references. It has therefore seemed pointless to capitalize works according to conventions which not only have no relation with the original work, but also do not restore the title entirely. In the following list of references, most title words (except in German) will therefore be left uncapitalized. The names of the authors have also been homogenized and initials expanded, as much as possible.

The reader should keep in mind that this list is not meant as a facsimile of the original works. The original style information could no doubt have been added as a note, but we have not done it here.
